Subject: RE: Work at Jorgensen/Boeing Begins around 7 tomorrow

Ravi,

I was on site yesterday but the contractor was unable to get the hydraulic hammer attachment to work so they hadn't removed the concrete to dig the test pit as of 1345. They had a mechanic coming down from Marysville. He was expected to be there by 1530 so it was expected the actual work would start this morning at 0700. Kristen Kerns and Jacob Williams are on site today and have been there since 0700. Kristen can be reached at 541-944-2806.

Rob Work is starting tomorrow at 7 am and I'd like you out there. You need to be there the whole day and make sure that the stock pile area is not in exclusion zone and is in the right place according to the plan. Trucks need to be covered and wheels appropriately washed. Soil samples need to be taken following excavation prior to backfill (final leave surface) and then after backfill is placed on the final graded surface.

Send me your cell so we can talk more about this. Mine is (b) (6) . Feel free to call me at 7 if something is going wrong or deviates from the plan. I am looking for excruciating detail in your field reports, in particular any deviations from the CMP WP or just plain things that have gone wrong.

Thanks

Ravi
